Projects

iTube — React.js video sharing platform [live|repo](#)

- Single-page video sharing app that uses AWS APIs to host videos.
- Implements React/Redux to render user content with modals to improve user experience and site reliability.
- Leverages Rails to manage site database and create polymorphic associations.

askCarl — Vanilla JavaScript animation showcase [live|repo](#)

- JS and CSS animation showcase where users learn animation principles.
- Custom-built physics engine renders animations using HTML canvas.
- Relies on Webpack NPM module to bundle JS files.

Experience

PanAmerican Post — Media Editor

Dec. 2017 -2018

Led team of 26 writers, editors, and programmers as part of company leadership team to grow our audience from hundreds of thousands to millions of monthly readers.

Increased conversion from search results 50% by training staff on how to make the most of SEO tools built into our content management sys.

Developed and deployed twice as fast home page and article pages that made it easier for all stakeholders to participate in the development process and customize page layouts for their needs.

Cut development costs by \$60K a year with introduction of streamlined design and deploy workflows that reduced the necessary back and forth between management and developers.

Education

App Academy, NY — Fullstack Development

Nov. 2018 - Feb. 2019

Immersive 12-week program for full-stack web development. Topics include best-coding practices, Ruby, Javascript, Rails, React/Redux, as well as algorithms and data structure.
